

- (d) backtranslating each of said (poly)peptide sequences into a corresponding coding nucleic acid sequence;
- (e) setting up cleavage sites in regions adjacent to or between the ends of sub-sequences encoding said sub-elements, each of said cleavage sites:
 - (ea) being unique within each of said coding nucleic acid sequences;
 - (eb) being common to the corresponding sub-sequences of any said coding nucleic acids.

57. A collection of (poly)peptides comprising a plurality of (poly)peptides according to claim 56.

58. A kit comprising a (poly)peptide according to claim 56.

59. A kit comprising a collection of (poly)peptides according to claim 57.

60. A collection of (poly)peptides according to claim 57, comprising specific (poly)peptides wherein the genes encoding said specific (poly)peptides

- (a) are either homologous, or represent consensus gene sequences derived from at least three homologous genes, and
- (b) carry cleavage sites, each of which:
 - (ba) lie at or adjacent to the ends of genetic sub-sequences which encode structural sub-elements,
 - (bb) are unique within each gene sequence,
 - (bc) do not form compatible sites with respect to any single sub-sequence, and
 - (bd) are common to all homologous sub-sequences.

61. A kit comprising a collection of (poly)peptides according to claim 60.
